

How to stop syncing content between articles

Last Modified on 05/26/2026 5:17 pm EDT

To stop syncing content between a parent and child article, you'll need to remove the syncing relationship. This sets the child article up as a standalone article. The child will keep the current active version but lose the version history of previous versions the parent has.

The information below varies based on whether you're using our 2026 new editor or old editor.

To figure out which instructions to follow:

1. Open any article for editing.
2. If the lefthand navigation is collapsed and there's a link near the top of the page to **Switch to old editor**, follow the **New editor** documentation.
3. If the lefthand navigation is expanded and the top of the editor and the righthand column have a heavier grey background, follow the **Old editor** documentation.

Here are side-by-side examples of the new editor and the old editor:

Try out the new editor

We'd love your feedback on the new editor. To switch to the new editor, open any article for editing and select the **Switch to new editor** link at the top of the editor.

What happens when you stop syncing

When you stop syncing, the parent and child article(s) won't share their content or versions and they won't have the warnings in the editor linking to the other synced article(s). Updates to one will no longer impact the other.

The child article(s):

- Will lose all versions except the current active one
 - Won't have any **revision history**. The article body at the moment you stop sharing is considered the first edit to the article.
-
