

# Synced article behavior in shared content categories

Last Modified on 05/27/2026 3:08 pm EDT

When articles are synced as part of a shared content category, parent and child articles will share and automatically sync more information than regular [Synced articles](#).

These articles will sync:

- Article body content
- Permalink
- Title
- Summary (formerly known as Meta Description in the old article editor)
- Author
- Publishing status (except if you delete the child article; that delete doesn't impact the parent article)
- Internal title
- Short title
- Search phrases
- Thumbnail
- Banner
- Title tag
- All URL redirect settings
- Template and topic article settings
- New/Updated Callouts
- Video callout
- Reader group restrictions
- Author team restrictions
- Comments settings
- Feedback settings
- Related articles
- Pages to recommend on
- Visibility settings (formerly known as Display Settings in the old article editor)
- Versions + version notes (once [child is published](#))
- Revision history (only visible on the parent)

## What isn't shared?

For parent and child articles in shared content categories, the parent and child articles won't share or automatically sync:

- Tags

- **Old links**
  - **Internal note**
-
