

☒ Nat'l Dictionary Day bugfixes and improvements

Last modified on 10/15/2026 7:37 pm EDT

Well, here's a day well suited to you wonderful writers who use our product. Happy National Dictionary Day! Like many of you, I'm sure, I've had a lifelong love of dictionaries of all sorts. This has continued well into the modern age with [Merriam-Webster being among my favorite Instagram accounts](#), and [The Allusionist](#) being among my favorite podcasts. Now, let's get into the bugfixes and improvements recently released on your favorite writing helper ☒

Improvements

- We made an improvement to how the top navigation bar appears by default. It now is set above the [table of contents](#), which means it isn't cut off when you have the ToC open. It's a small change that makes for a much cleaner look.
- We have added another **Import** tool to our ever-growing list. Now you can [import content from Help Scout Docs](#) with a few clicks.
- Previously, the copyright year was hard-coded into your knowledge base's footer. This meant that if you didn't update it manually, it would be out of date. New knowledge bases now use a merge code that updates it automatically to match the current year. If your knowledge base has a hard-coded year, or a JavaScript-based year calculation, you can replace it with the new [Body merge code](#).

Bugfixes

- Within [Owl Analytics](#), if you went to **Overview > Last Month**, you'd get an error. We've fixed this now, so you can see last month's Overview without issue.
- There was a bug that caused malformed JSON to be returned when you hit the POST endpoint to create a new [webhook](#) via our [API](#). That's been resolved now!
