

New resource: API guide for AI coding assistants

Last modified on 10/19/2026 11:34 am EDT

As we continue developing our [MCP \(Model Context Protocol\) server](#), we've been releasing parts that needed to be completed ahead of that. Things like our new [scoped API keys](#) were a big part of that.

A number of our customers are already connecting their AI assistants with KnowledgeOwl via our API and have been accomplishing a lot this way. We thought it could be helpful to share what we've learned from those connections. Or, more specifically, give you a guide you can use to teach your AI coding assistant how to work with KnowledgeOwl.

That's why we created an [API guide for AI coding assistants](#). Give its URL to your AI assistant, or paste it into the assistant's instructions file, before it starts working with the API. In it, you'll find:

- Which docs to start with.
- Guidelines on what to include in every request your AI assistant sends to the KnowledgeOwl API.
- Information on rate limits and caching.
- Important specifics on article status values.
- How to update articles safely.
- Tips on uploading [files](#).

Go to the [API guide for AI coding assistants](#) now for more information.
